SUMMARY

Product designer with **five years building B2B software for enterprise clients** — three designing DottedSign, an e-signature SaaS, and two as a system analyst on HR and payroll systems. My work is consistently in products where **being wrong has real consequences**: payroll that has to reconcile, signatures that have to hold up legally. I write the spec as well as design the flow. Currently studying Interactive Media Design at Algonquin College, seeking a product design internship from **Winter 2027**.

EXPERIENCE

Product Designer — Kdan Mobile, Taiwan

Nov 2022 – Nov 2025

DottedSign — B2B e-signature platform, delivered as both cloud SaaS and on-premise enterprise deployments. Product team, following one year on enterprise implementations.

- **Designed the Editor role**, a new signing-flow stage letting a second party correct documents and signers in a task already in progress while keeping everything already signed immutable — unblocking an enterprise real-estate client whose core workflow depended on it.
- Resolved a cross-plan permission conflict in that feature by having editors **inherit the task initiator's entitlements** rather than their own account's, the difference between a task that can be corrected and one that is permanently stuck.
- **Designed Mobile ID identity verification** on an integration with TWCA, Taiwan's national certificate authority: the QR-based desktop-to-mobile handoff, retry and 24-hour lockout logic, task-pending state, and initiator notification on failure. Designed a second method on the same roadmap using Taiwan's mobile Citizen Digital Certificate.
- Designed the product's **e-commerce system integration** and marketing features including campaign flows and paid conversion CTAs, working directly with the marketing team.
- Ran **usability testing** in a team design sprint, putting interactive Figma prototypes in front of testers to pressure-test early feature concepts.
- Owned **user flows, UML diagrams, wireframes and functional specs** that engineering built from directly, and took part in **system architecture planning** across both deployment models — working day to day with PM, UI design, front-end, back-end and QA.

System Analyst — InterInfo Co., Taiwan

Nov 2020 – Nov 2022

Customized on-premise HR and payroll systems for enterprise clients.

- Conducted **requirement interviews with enterprise clients** and translated their operational processes into product requirement documents.
- **Designed customized payroll features** for clients whose compensation rules all differed — work centred on making variable, high-stakes calculations legible and checkable by the HR staff accountable for the numbers. Built within an in-house component library and tested with engineers through to deployment.
- Stayed close to clients through delivery and **carried recurring field feedback back to the product team** as concrete optimization proposals.

SKILLS

DESIGN	User flows · Wireframing · Prototyping · Interaction & failure-state design · Functional specs · Usability testing
SYSTEMS	System analysis · UML · Third-party API integration · MS SQL · Requirements gathering
TOOLS	Figma · Illustrator · Photoshop · HTML / CSS

EDUCATION

Diploma, Interactive Media Design — Algonquin College, Ottawa

2026 – 2028

BSc, Industrial and Information Management — National Cheng Kung University, Taiwan

2015 – 2019

Languages Mandarin (native) · English (professional)

Availability Full-time, Winter 2027 · Study permit + co-op work permit
